As a Front-End Engineer with 3+ years of hands-on experience, I specialize in architecting scalable, accessible, and performant enterprise web applications using React.js, Next.js, and TypeScript. Led UI architecture for high-traffic SaaS platforms serving 1M+ users, optimizing for speed and user engagement—achieving a 40% faster page load time (validated via Lighthouse and Google Analytics A/B testing) through advanced techniques like code splitting, lazy loading, image compression, and bundle analysis. These enhancements directly drove a 15% increase in user retention, 25% longer session durations, 18% more repeat visits, and a 12% revenue uplift from improved conversions. Passionate about startup environments, I thrive in agile teams, rapidly prototyping MVPs, and owning features from ideation to long-term maintenance, including CI/CD integration and performance monitoring

Experience

06/2022 – present
Remote

Freelance Frontend Engineer (Contract-based) Freelance

- Architected and delivered scalable, component-driven UIs using React, Next.js, Redux for state management, and Jest/Playwright for testing in a high-traffic SaaS platform serving 1M+ users. Reduced page load times by 40% (Lighthouse-validated, with ongoing monitoring via Sentry) through code splitting, lazy loading, image optimization, and server-side rendering—resulting in 25% longer session durations, 18% more repeat visits, and a 12% boost in conversion-driven revenue (tracked via Google Analytics). Handled long-term maintenance, including iterative updates, bug fixes, and scaling for traffic spikes, ensuring 99.9% uptime.
- Drove SEO initiatives using Next.js features like dynamic meta tags, structured data, and Google Search Console integration, improving organic traffic by 60% and elevating search rankings for 5+ client websites—leading to sustained growth in user acquisition without increased ad spend.
- Integrated WCAG 2.1-compliant accessibility practices, including ARIA landmarks, full keyboard navigation, screen reader optimization (tested with NVDA and VoiceOver), and automated audits via Axe, across various client projects. This enhanced usability for users with disabilities, broadened audience reach by 20%, and ensured compliance for enterprise clients.
- Collaborated with cross-functional global teams (designers, backend engineers, and stakeholders) in agile sprints to prototype and ship enterprise-grade web apps on time, often under tight deadlines. Adapted to startup-like pivots by building MVPs with rapid iterations, integrating CI/CD pipelines (GitHub Actions/Jenkins), and contributing to code reviews—delivering features that aligned with business goals.

Projects

04/2025 – 04/2025

Lead Developer AI-Powered Interview Prep Platform

- Utilized Next.js, TypeScript and Google Gemini AI to create a conversational AI platform called **Recruiteek-AI** that generates targeted interview questions and provides real-time feedback, simulating a human interviewer.
- Integrated Vapi, an AI-powered voice agent, to conduct voice-based mock interviews, offering immersive practice sessions.

Projects

- Implemented secure authentication and scalable data storage using Firebase Authentication, Firestore, and Cloud Functions, ensuring robust and reliable platform performance.
- Deployed the platform globally on Vercel, optimizing for speed and accessibility.
